

# Product Focus

Issue 2 - March 2008

Cranford's recent addition of the Dorgard, Deafgard and System X to their product portfolio has proved to be a popular decision indeed!

But for those of you who didn't know of this, this means we are now fully equipped to take care of your wireless and, continue aiding, your DDA needs!

We will also be exhibiting at Firex South this year, please be sure to come and visit us at stand H8.

## VSO LED

It is my pleasure to announce that after the wait, the excitement and the significant interest, Cranford's VSO sounder / beacon will be available to buy from March 2008! The unique design of its LED ring ensures a complete diffusion of light covering a full 360 degrees! Aesthetically pleasing and un-miss able, upon release the VSO's LED ring will be available in a choice of a red, amber or clear lens, and will later be released with the option of a blue lens. All varieties will be available in either a 4 or 32 tone choice. This innovative product is also engineered to fit all leading smoke detector brands and if desired, with use of their matching readily available coverplate, can be used as a wall mounted sounder / beacon. Suppling both an audible and visual alert this product will help assisting you with your DDA compliancy.

## VPR

The VPR range is available in 3 different variants, the standard 24 volt 4 tone sounder, the Dutch-Tone—EN54 approved sounder and the 32 tone 230V ac mains sounder. The standard 24 volt sounder is further more split into two categories, the VPR-SA2, best situated to low current consumption relative to sound output area, and the VPR-SA4 which is ideal for areas requiring maximum sound output. The VPR range is available in either red or white and features Cranford's flagship nose cone design for optimal sound output.

## Vocalarm™

Cranford's Vocalarm, a registered trademark, is ideal for those who want a specific warning or direct instructions given upon the

triggering of an alarm.

The Vocalarm has a choice of 36 different messages available to choose from, including fire, security and factory warnings.

The Vocalarm causes minimal confusion and upset due to its clear concise voice, essential in dangerous situations.

## VRS & VLS

The VRS and VLS room sounders provide customers with an alternative shape to the standard sounder.

These discrete yet powerful sounders have a unique nose cone which works by reflecting sound waves and causing them to disperse through an open space.

They have a choice of 4 tones and also have the ability to be used as a second stage alarm with the introduction of a third wire.

The VLS variant includes two fitted high intensity LED's providing a form of visual indication to its audible alert. It is also available with the words "Fire Alarm" silk screened on the front of the plate.
